## Author

### Gary Bernier

Hi! I am Gary, and the first time I used the Internet it was a dirt road headed nowhere. That pretty much makes me a Dinosaur by today's standards. Funny thing is I still feel like that young punk that wants to take on the world.

I love putting things together in the beginning it was connecting web pages to databases, now it is connecting landing pages and sales pages to customer relationship management tools that create sales funnels and auto responding email campaigns.

I am the guy that considers the complicated stuff easy and drives the vendors nuts because I always want more from their products.

The good news is it has become a lot easier to create even more powerful solutions in less time than was possible even a year ago.

I am a family man with two sons, one of which has over 1500 subscribers to his YouTube channel go figure. I am that guy in the basement surrounded by lots of screens.

When I am not basking in the glow of my monitors I am teaching and practicing martial arts, snow boarding, golfing and wind surfing.

I look forward to helping you grow your business on the Internet and seeing you work with Great Internet Advertising DotCom.

## About This Book

This book is not going to go into very little detail of Analytics. It is not a reference book on all the features and options in Analytics.

It is however, a book about getting Analytics setup in a way to measure the key elements so that you can make better decisions about how to Search Engine Optimize your site, and determine if your marketing spending on Pay Per Click Advertising is paying off, and how your Content Marketing Strategies are working for you.

This is a book about using Analytics to support your online marketing efforts to facilitate intelligent business growth.

The examples you will see later in the book are from real live websites that have been up and running for years. The screenshots and data provided are real, and are there to demonstrate how you can use these analytics features to enhance your marketing activities when you have your own data to observe.

The goal of this book is to show you how to use this powerful measurement and data analysis tool to support your marketing efforts, and allow you to make intelligent decisions about what to change to get better results.

## Introduction to Mastering Analytics

Marketing on the Internet means you can measure everything and determine if it is working. One of the key measurement tools every website should have in place is Google Analytics.

Analytics records the visits to your website, and a whole lot more if you have it configured properly.

It can profile the visitors for you by their age, gender and likes and dislikes. What's referred to as the demographics.

It can show you how people are finding your site by showing you the keywords people type in. This is super important for any advertising spends and for Search Engine Optimization.

It will show your most popular pages on your site, and the ones that people are leaving from. These are both great opportunities for optimizing your site to get the most out of it.

This guide is broken out into sections because some people may have Analytics already activated and installed on their site. They can gloss over Section 1 – Setup.

They will want to pay attention to Section 2 – Configuration where I will go into how to make sure you are able to ***measure all the key data I mentioned above that most people are missing out on.***

Section 3 – will be a quick overview of the sections of Analytics.

Section 4 – Acquisition – we will do a deep dive into ***how people are getting to your site.***

Section 5 – Behavior – I will share with you some really cool examples of ***how you can monitor how people are moving thorough your site.*** Which is really valuable for optimizing the flow, or the path visitors take.

Section 6 – Advanced Topics – You will learn **how to set and measure goals** so that you will know how well your marketing is working, and we will get into ***customizing your dashboard*** just for your site.

Bonus Appendix A – Webmaster Tools

## Section 1 - Setting Up Analytics for the first time

To setup Google Analytics you will need a Google Account. If you already have a Gmail account or have setup a Google Plus page then you are good to go. If not it just takes a couple of seconds to set one up for your business.

Visit <https://accounts.google.com/SignUp> to setup a Google Account.

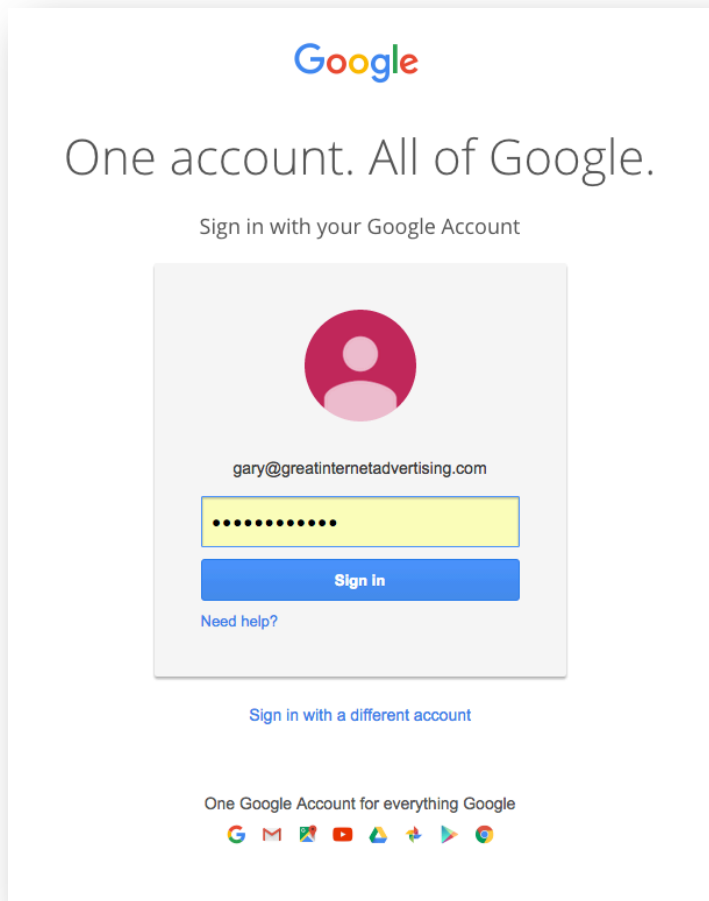

Figure 1 - Sign In To Your Google Account

Next visit Analytics - <https://analytics.google.com>

You will be presented with the “Sign up” screen below. Click “Sign up”.

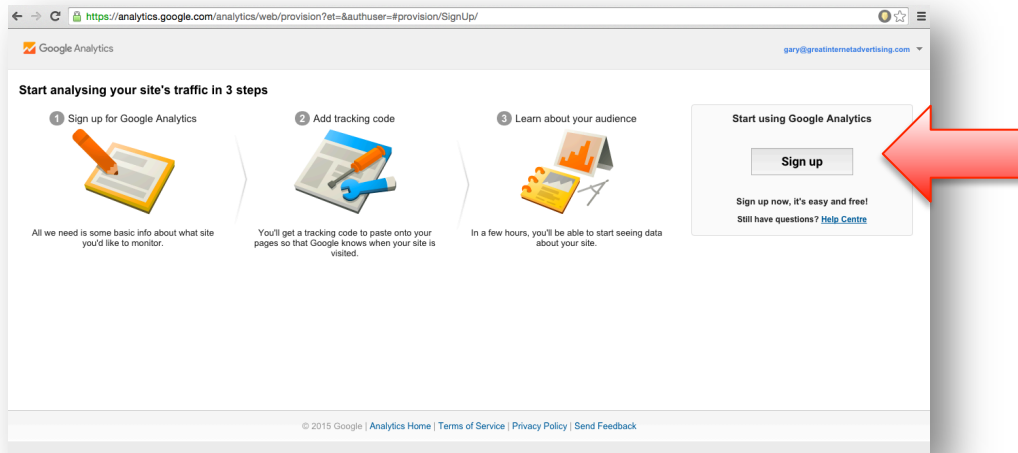

Figure 2 - Analytics Sign up

Next you will have to complete the New Account Screen, below. ***On the next page I will go over how to fill it out.***

Figure 3 - New Account Screen

## Setting up your account

Setting up your account

**Account Name** required  
Accounts are the top-most level of organisation and contain one or more tracking IDs.

Business Growth Guys

Setting up your property

**Website Name** required

BusinessGrowthGuys Dot Com Site

**Website URL** required

http:// businessgrowthguys.com

**Industry Category** ?

Business and Industrial Markets

**Reporting Time Zone**

Canada (GMT-05:00) Eastern Time - Toronto

Figure 4 - Completing New Account Info

**Account Name:** I recommend setting this to your business name. If you have more than one website you want to keep track of you want to make it something a bit more generic.

**Website Name:** This is the name for your website it can be the same as your website URL or it can be different it is just a label.

**Website URL:** This has to exactly match what you type in. It should have the www at the beginning if that is what you advertise.

**Industry Category:** Pick the closest one from the drop down list.

**Reporting Time Zone:** Set this to your local time zone.

## Data Sharing Settings:

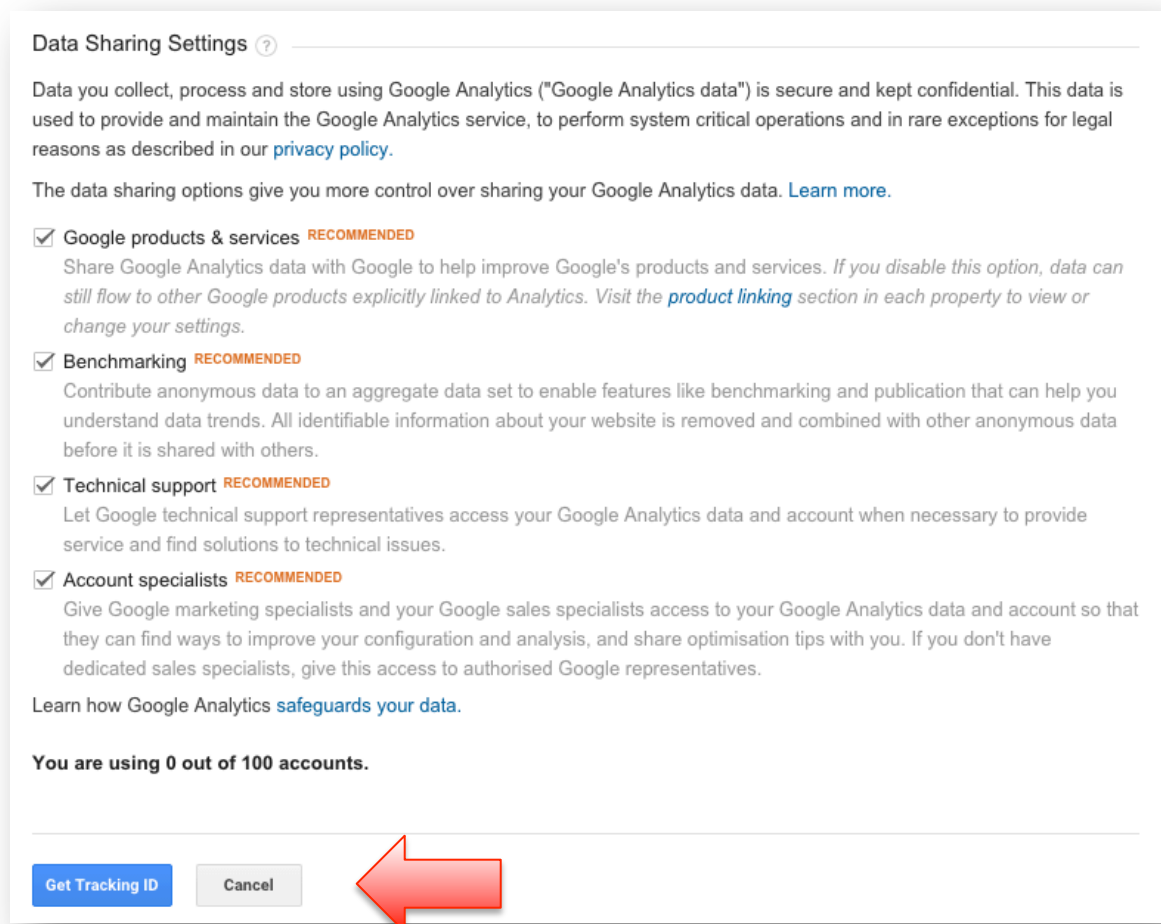

It's completely up to you on how you decide your data.

If you are thinking about using Google Adwords to advertise your business or Google Adsense to get paid by Google for advertising on your site then I would definitely recommend leaving "Google products & services" checked.

Both "Technical Support " and "Account Specialists" are good for that rare time when you need support from Google directly.

Benchmarking is really the only one that provides you with no practical benefit.

When you are done Click "Get Tracking ID".

**Data Sharing Settings** ?

Data you collect, process and store using Google Analytics ("Google Analytics data") is secure and kept confidential. This data is used to provide and maintain the Google Analytics service, to perform system critical operations and in rare exceptions for legal reasons as described in our [privacy policy](#).

The data sharing options give you more control over sharing your Google Analytics data. [Learn more](#).

- ☒ **Google products & services** **RECOMMENDED**  
Share Google Analytics data with Google to help improve Google's products and services. *If you disable this option, data can still flow to other Google products explicitly linked to Analytics. Visit the [product linking](#) section in each property to view or change your settings.*
- ☒ **Benchmarking** **RECOMMENDED**  
Contribute anonymous data to an aggregate data set to enable features like benchmarking and publication that can help you understand data trends. All identifiable information about your website is removed and combined with other anonymous data before it is shared with others.
- ☒ **Technical support** **RECOMMENDED**  
Let Google technical support representatives access your Google Analytics data and account when necessary to provide service and find solutions to technical issues.
- ☒ **Account specialists** **RECOMMENDED**  
Give Google marketing specialists and your Google sales specialists access to your Google Analytics data and account so that they can find ways to improve your configuration and analysis, and share optimisation tips with you. If you don't have dedicated sales specialists, give this access to authorised Google representatives.

Learn how Google Analytics [safeguards your data](#).

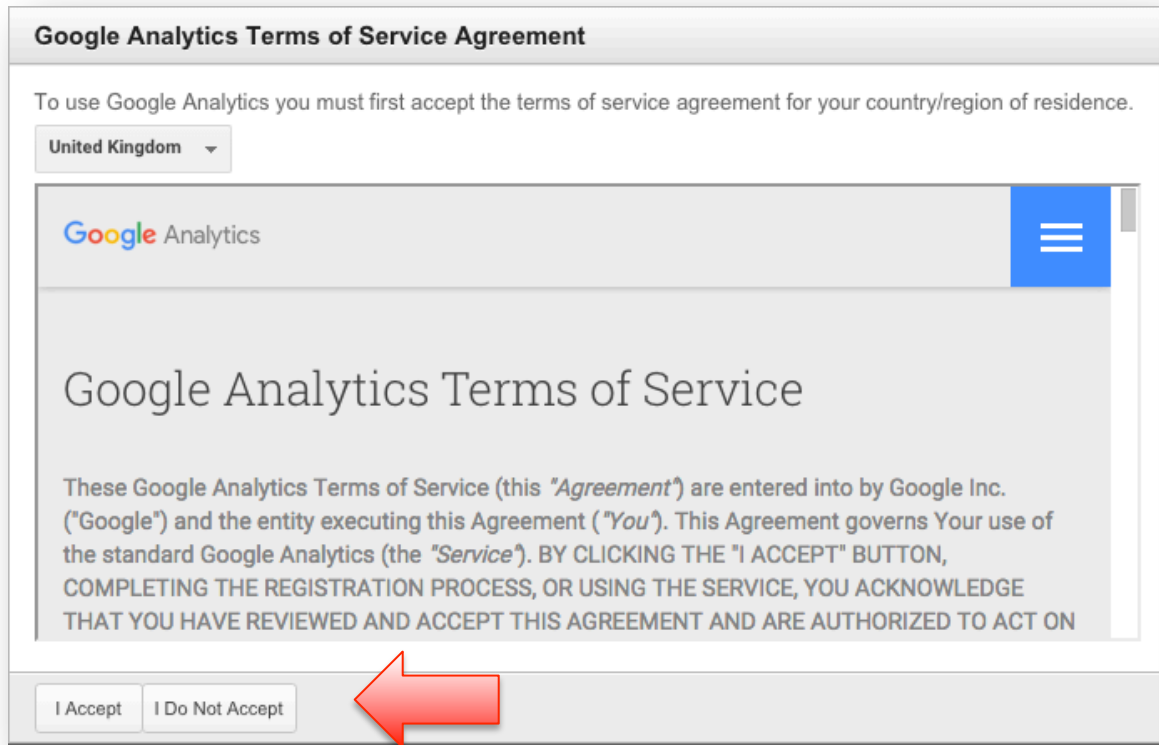

**You are using 0 out of 100 accounts.**

[Get Tracking ID](#) [Cancel](#)

Figure 5 - Data Sharing Settings - Get Tracking ID

## Terms of Service

Accept the terms of service and the basic setup of your monitoring site is done.

**Google Analytics Terms of Service Agreement**

To use Google Analytics you must first accept the terms of service agreement for your country/region of residence.

United Kingdom ▼

Google Analytics

### Google Analytics Terms of Service

These Google Analytics Terms of Service (this *"Agreement"*) are entered into by Google Inc. ("Google") and the entity executing this Agreement (*"You"*). This Agreement governs Your use of the standard Google Analytics (the *"Service"*). BY CLICKING THE "I ACCEPT" BUTTON, COMPLETING THE REGISTRATION PROCESS, OR USING THE SERVICE, YOU ACKNOWLEDGE THAT YOU HAVE REVIEWED AND ACCEPT THIS AGREEMENT AND ARE AUTHORIZED TO ACT ON

Figure 6 - Terms of Service Acceptance

## Tracking Code

**This is the secret sauce of Analytics, *this needs to appear in every webpage you have to capture all the visits.***

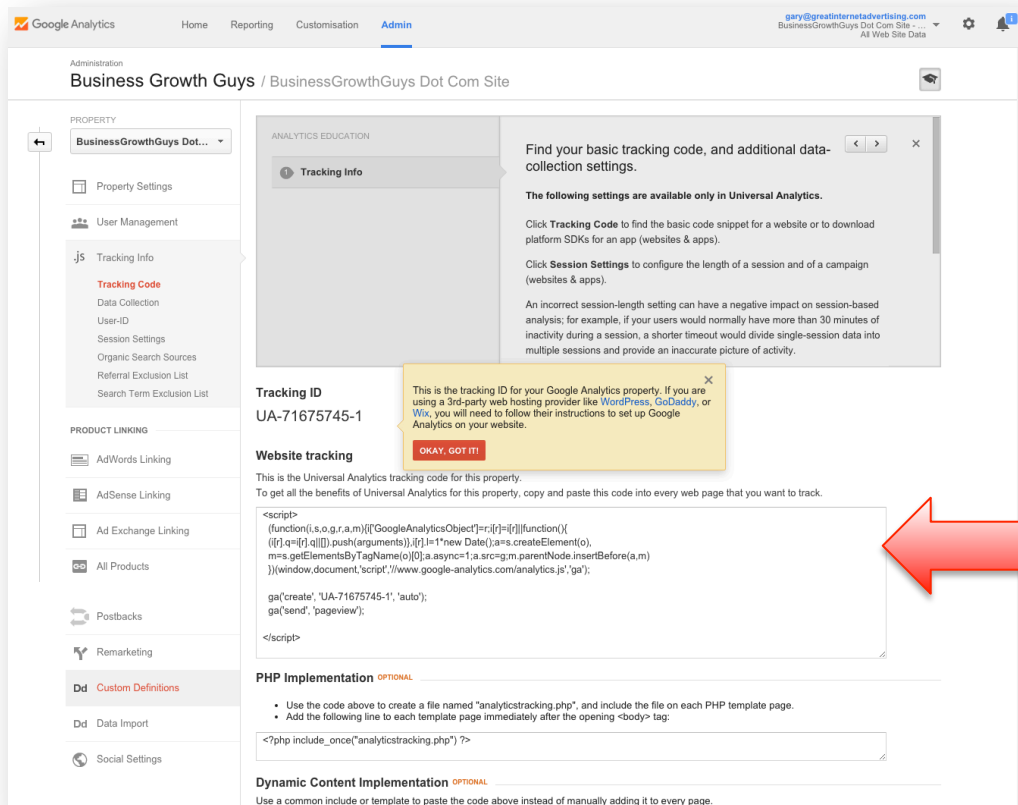

Figure 7 - Initial Screen

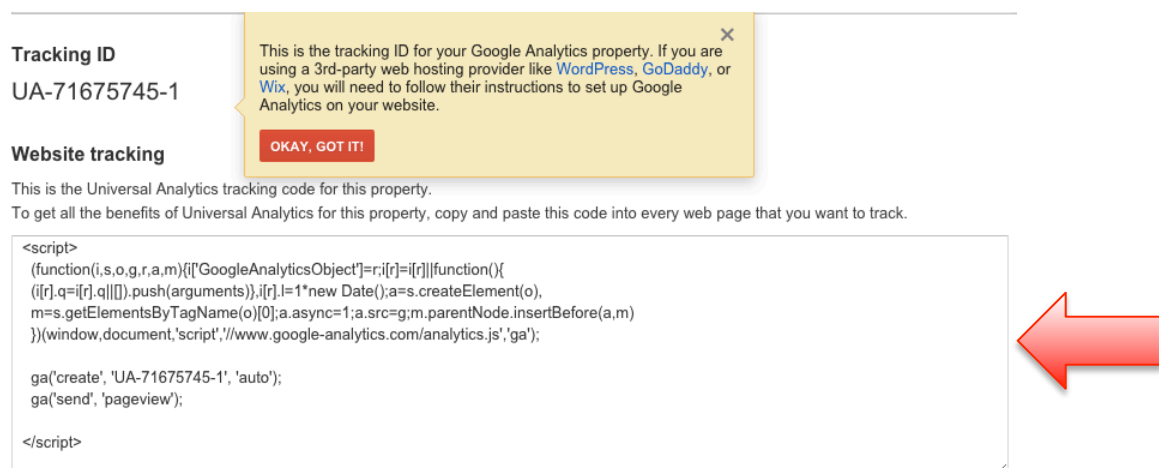

Figure 8 - Tracking ID & Tracking Code

## Adding The Analytics Tracking Code to WordPress

Install “Google Analytics by Yoast” Plugin.

Plugins then “Add New” in the search box type “Google Analytics by Yoast” and install and activate it.

Figure 9 - Google Analytics by Yoast for WordPress

Since you are already logged into Google Analytics the next step will be super easy. Click on the “Authenticate with your Google account” button. You will get a code popup in a window highlight the whole code and copy and paste it into WordPress.

It is that simple.

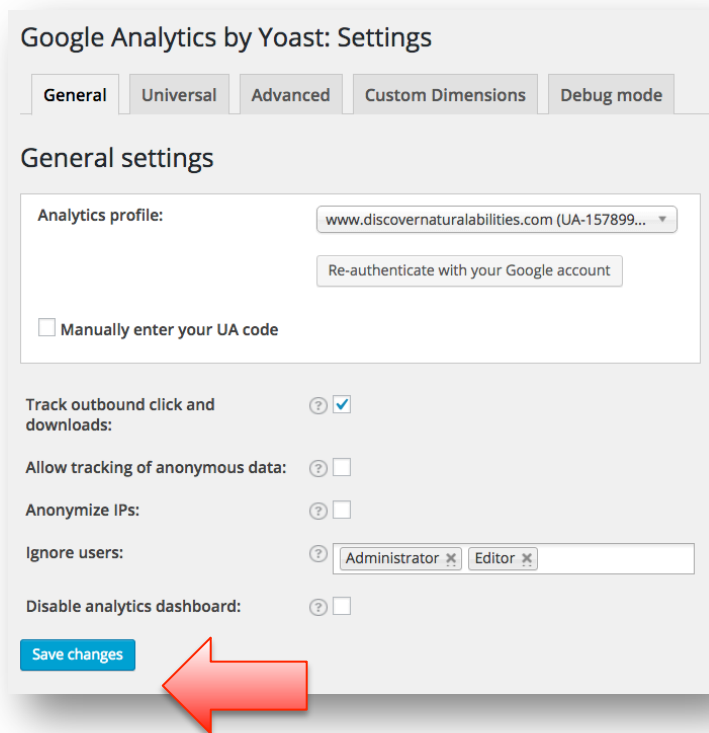

Figure 10 - Connecting to Your Analytics Profile

## Adding The Analytics Tracking Code to Standard HTML

You can easily add the tracking code to any standard html page. This is a lot of work if you have a lot of pages. Most people are using a tool that will help them add the code to all their pages with a search and replace function.

```
<HTML>  
<HEAD>
```

***Analytics Tracking Code should go in the head of the document.***

```
</HEAD>  
<BODY>
```

***Everything you see in the browser goes between the Body Tags.***

```
</BODY>  
</HTML>
```

Example Below:

```
<HTML>  
<HEAD>  
  
<script>  
  (function(i,s,o,g,r,a,m){i['GoogleAnalyticsObject']=r;i[r]=i[r]||function(){  
    (i[r].q=i[r].q||[]).push(arguments)},i[r].l=1*new Date();a=s.createElement(o),  
  
    m=s.getElementsByTagName(o)[0];a.async=1;a.src=g;m.parentNode.insertBefore(a,m)  
  })(window,document,'script','//www.google-analytics.com/analytics.js','ga');  
  
  ga('create', 'UA-71675745-1', 'auto');  
  ga('send', 'pageview');  
  
</script>  
</HEAD>  
<BODY>
```

***Everything you see in the browser goes between the Body Tags.***

```
</BODY>  
</HTML>
```

## Adding Analytics Tracking To Other Platforms

Many web-based applications will let you put the analytics into all your pages by entering into one standard place, often referred to as “Head Code”. Check your product documentation for adding Analytics.

Figure 11 - Head Tracking Code

## Section 2 - Tuning Analytics – Maximizing the Data You Get

***This is the section you need to implement in full.***

This section tells you how to turn on the things you need to get the data you really want for your online marketing whether that is Search Engine Optimization, Pay Per Click advertising with Google Adwords, Content Marketing.

***These are the things that are not setup when I log into customers accounts to get things setup for them!***

These are the defaults that need to be changed and in the future made easier by Google.

Let's get started in the "Admin" section of Analytics with "Data Collection" under your "Property".

### Data Collection

By default both Remarketing and Advertising Reporting Features are off. Because at some point you may want to run Google Ads to promote your website, or you want to understand the profile of your visitor better I recommend turning these two options on.
